What Are We Getting Ourselves Into?

Convention-over-configuration

VS.

Legacy Schemas

Opinionated Software

VS.

Old Designs and Ideas

DAOs Considered Harmful

- Grails Object-Relational Mapping (GORM)
 - Rich relationship model
 - Declarative validation
 - Powerful query support
 - Easy scaffolding

Conventional ThinkingDemo

Defying Conventional Wisdom

Non-conforming table/column names

Custom sequences

Complex keys

Advanced mappings

Certificate of Nonconformity Demo

Grails + Hibernate XML Step 1

- Review existing schema
- Sketch out desired object model
 - Favor object-oriented thinking
 - The database shall bend

Define domain classes

No Schema Left Behind Demo

Grails + Hibernate XMLStep 2

Prepare HBM file for each deviant table

- Define hibernate.cfg.xml
- Test!

Why Hibernate XML?

- Standard Hibernate artifacts
- Reuse your existing mappings?
- Existing tool support
- Full power of GORM
 - Dynamic persistence methods
 - Constraints
 - Scaffolding

Fewer Sharp Corners?

GORM DSL

<Brand new for 1.0!>

```
class Knight {
  // . . .
  static mapping = {
    table 'knights'
    version false
    id column: \knight id'
    columns {
      numDragonsSlain column: 'dragon count'
      // . . .
```

More Declarative DSL Goodness

- ID generation
- Lazy/eager fetching
- Inheritance strategy
- Index definitions
- Caching

Other Mapping Strategies

- Hibernate (EJB3-Style) Annotations
 - infoq.com/articles/grails-ejb-tutorial
- JPA (Coming soon)

Still More to Explore

- GORM outside of Grails
 - grails.org/gorm+-+standalone+gorm

- Custom user types
 - grails.org/hibernate+integration
